

2011-2012 OTHER CRITICAL STATE CONSERVATION REFORM INITIATIVES

Jack Clarke, Director of Public Policy & Government Relations

Jennifer Ryan, Legislative Director

Mass Audubon works to protect the nature of Massachusetts for people and wildlife. Together with more than 100,000 members, we care for 34,000 acres of conservation land, provide educational programs for 225,000 children and adults annually, and advocate for sound environmental policies at local, state, and federal levels. Mass Audubon's mission and actions have expanded since our beginning in 1896 when our founders set out to stop the slaughter of birds for use on women's fashions. Today we are the largest conservation organization in New England. Our statewide network of wildlife sanctuaries, in 90 Massachusetts communities, welcomes visitors of all ages and serves as the base for our work.

Today the Commonwealth has a strong body of laws and programs dedicated to the protection of biological diversity and addressing climate change. Current statutes and regulations are important conservation tools only when implemented with adequate political and financial support for enforcement. The rapid change in the Commonwealth's economy, and the resulting impact on our natural resources, requires reforms of existing programs in order to keep pace with present challenges and improve the efficiency, transparency, and accountability of state government.

Stewardship Through Efficiency, Transparency, and Accountability

Mass Audubon looks forward to working with legislators and agency officials during the 2011-2012 session to address the following issues that are in need of reform:

- *Natural Heritage & Endangered Species Fund:* Need to amend section 35D of chapter 10 of the Massachusetts General Laws to permanently waive the application of indirect (overhead) cost charges on expenditures for endangered species recovery.
- *Division of Capital Asset Management & Maintenance Surplus Lands Disposition:* Need to amend section 548 of chapter 26 of the Acts of 2003 to establish stronger mechanisms for environmental agency review and municipal involvement prior to auction of surplus state lands.
- *Forestry Reform:* Need to modify existing state forestry laws (M.G.L. chapters 61 and 132) to improve forest cutting standards and encourage sustainable forestry on private lands; enhance incentives for use of locally-harvested timber; ensure sustainable forestry under any new biofuels initiatives; and authorize the state to establish a system of forest reserves, including old growth, on state forests and state wildlife management areas. Establish statutorily permanent forest reserves.
- *Mosquito Control:* Need to expand the state reclamation and mosquito control board (M.G.L. chapter 252, section 2) to include seats for the Department of Public Health and the Department of Fish and Game, providing appropriate public health and wildlife oversight and transparency and efficacy tracking in mosquito control practices.
- *Climate Change:* Need to ensure that the commonwealth's forward thinking climate change laws and regulations are fully implemented, reducing greenhouse gas emissions and developing well-sited and managed renewable energy resources.
