

Leaders in Environmental Access For All

at Drumlin Farm Wildlife Sanctuary

Environmental education programs for people of all abilities.

Sensory Farm Explorations

Using all of our senses we will explore and experience life on a local farm. Students will have the opportunity to participate in adapted daily chores and other adapted farm activities.

Sensory Nature Explorations

Using all of our senses, we will explore fields, trails, forests, and wetlands. Through a variety of hands-on activities, investigate the relationships among plants, animals, people, and the natural resources we share.

Custom Outreach Programs

Our teacher-naturalists will come to your school. Programs may include bringing native wildlife into the classroom, or guided investigations of outdoor areas at or near your school. Our programs enrich natural history and science lessons and help build connections to the local environment.

Length and pricing based on program design.

Accessible Curriculum Supplemental Materials:

We strive to ensure that every student has the tools they need to participate in our environmental programs.

- **Chaperone Lesson Packet:** A variety of curriculum-based lesson options for chaperones, aides or teachers working with an independent learner in an inclusive setting.
- **Curriculum Social Stories:** Program-specific social stories delivered prior to your visit or the day of your lesson.
- **Accessible Terrain and Curriculum Locations:** Trails, interactive displays, and accessible location.

Vocational Programs

Students have the opportunity to learn and practice skills important to future employment and education. Our staff will work with your program's needs to incorporate vocational and transitional goals such as job descriptions, task lists, resume submittal, application, interview, and intern handbooks.

Please note: Space is limited and students must be chaperoned. Drumlin Farm does not provide job coach services.

Farmhand Intern (groups of two or more)

With a teacher-naturalist, participants work various jobs around the farm. Through hands-on experience, this program provides knowledge of farming and animal-care practices.

Ecological Studies Intern (groups of three or more)

Students will monitor changes in the climate through data collection, record keeping, and data analysis of a variety of environmental conditions throughout the sanctuary. After initial training by teacher-naturalists, students will work independently with their chaperone or job coach.

Wildlife Care Intern

(One student: Requires application and interview)

This is a wonderful opportunity for students interested in animal care to work hands-on with our wildlife, while at the same time developing valuable job skills. After initial training by teacher-naturalists, students will work independently with their chaperone or job coach.

Program offerings can be adapted for learners of all abilities. For pricing and details, contact Special Education Coordinator Erin Pitkin: 781-259-2247 | epitkin@massaudubon.org
